

BARBIERI electronic - Professional OEM partner

**BARBIERI electronic, a professional
partner for OEM
(Original Equipment Manufacturer)**

For the sectors

- **Color Management,**
- **Chemistry control for minilabs**
- **Calibration of digital output devices**

BARBIERI
electronic
When Color Quality counts

BARBIERI electronic - Professional OEM partner

History

BARBIERI electronic, as a manufacturer of densitometers and spectrophotometers was founded in 1983 by Ing. Siegfried Barbieri and has his headquarter in Brixen, South Tyrol in the middle of the Italian Alps. Siegfried Barbieri graduated with a diploma in electronic engineering in Munich before working for Siemens. Before founding his own Company Siegfried Barbieri worked as chief engineer in the R&D Department of Durst Phototechnik in Brixen.

With the spectrophotometer Spectro 100xy, whose production started in 1997, Barbieri electronic entered in the field of digital printing. From that time on Barbieri electronic specialized more and more in this particular field gaining a deep knowledge in Color Management thanks to intensive contacts with the end-users.

Today Barbieri electronic supplies well-known companies both in the photographic as well as in the graphic arts industry.

Our Mission

Barbieri electronic as a manufacturer of color measuring devices has a long lasting experience and a deep knowledge in the sectors of Color Management, process control and calibration of digital output devices. For our customers in the OEM-segment (Original Equipment Manufacturer) we are a flexible partner which reacts in a quick and uncomplicated way to their needs. We help them in obtaining maximum color fidelity of utmost quality with their equipment.

Thanks to the intensive cooperation between the technicians of our OEM-partners and Barbieri electronic we are in a position to develop together ideal problem solutions.

Due to the use of high quality components the products developed and produced by Barbieri electronic are of extremely high quality and of long duration.

Our main products

Product group: Color Management

- Spectro LFP
Professional spectrophotometer with automatic measuring system (reflection and transmission) for the most different materials
- Spectro Swing
Professional spectrophotometer with automatic measuring system (reflection and transmission)
- Color Management software
Creates ICC profiles for all types of output devices (RGB and CMYK) and scanner, calibrates monitors, determines printable colors

Product group: Photographic process control

- Centralized process control for minilab chains with different innovative options for a 100% territory covering transmission of process data.
- Measuring heads for minilabs
- Built-in densitometers for minilabs
- Handy and compact densitometers for reflection and transmission
- Black and white densitometers (table-top units)
- Infra-red densitometers (table-top units)
- Software for quality control

Your advantages

• Quality products

The high degree of knowledge and know how as well as the use of high quality components guarantee products of utmost quality. The products are also continuously improved.

• Personalized products

The adaptation of the units to your needs or the personalization of the units, the instructions for use and the data sheets make the products correspond exactly to your specifications.

• Cooperation in R&D

Thanks to the close lead during development the products are adapted exactly to your requests.

• Simple communication

Thanks to the direct communication with the responsible people communication is extremely direct and uncomplicated.

• Exchange of experiences

The experience of Barbieri electronic will be of big help also to you.

Member of ICC (International Color Consortium)

BARBIERI electronic is member of this Consortium. All developed, produced and sold equipment corresponds to ICC specifications.

For you, as a customer of BARBIERI this is again a demonstration of the high professional competence of the Barbieri electronic company.
